This text provides a comprehensive analysis of contemporary macroeconomics, within a European and global context. The authors balance the theoretical aspects with up-to-date policy examples throughout, allowing the reader to relate the concepts to their own economic environment.

The Eurozone crisis which started in spring 2010 as a Greek budget crisis has alerted Europeans that the issue of defaulting sovereigns is not one reserved just for the poor and poorest countries on this globe. The crisis painfully amplified that developed countries, too, might be hit by this phenomenon. To be sure, this insight is far from novel - the history of defaulting states reaches back into history for at least two millennia. And yet, lawyers have surprisingly abstained more or less completely from discussing this subject and developing possible solutions. Beginning with the Argentina crisis in 2001, this neglect began to vanish to a certain degree and this movement got some momentum in 2010 by the Eurozone crisis. The present book collects contributions from authors most of whom have participated in a conference on this issue in January 2012 at the Humboldt-Universität zu Berlin. The presentations, thus, provide a unique overview of the present discussion both from an economic and legal perspective.

IS-LM is perhaps the prime example of 'cognitive dissonance' in economics, and is problematic to many economists. On the one hand, the IS-LM model is still taught by many academic economists or they use it to derive the AD-AS approach. On the other hand, the same economists realize the limitations of the basic IS-LM model and would not now use it for policy analysis, as they did in the past. The distinction between pedagogical and analytical efficacy is made by all the authors in this volume regarding the IS-LM model. Indeed, even those who would reject using the model for modern policy analysis still see the basic model as useful for teaching purposes. Moreover, in an augmented form, some of the authors in this volume

would even see fit to use IS-LM for modern policy analysis. As will be seen, therefore, the IS-LM model is 'not yet dead'. Rather, the model's 'plasticity' has enabled it to undergo a metamorphosis into augmented form, enabling its continuing utilization in economics accordingly.

A presentation of the basic models of the most important economic agents (households, firms, the banking system etc.). The influence of ethics on the decisions of persons is discussed within the context of mutual influences of one person on another. It is shown that this leads to a Markov chain which converges to a final situation which in many cases is independent of the initial conditions. The book helps the reader to understand the interdependence of humanities and economics and how to model this interdependence in economics.

Bridging the theory and practice of monetary policy, this book presents aspects of the New-Keynesian theory of monetary policy and its implications for the practical decision-making of central bankers. It also outlines important lessons for policymakers.

First published in 1998, this volume contains an edited selection of papers presented at the Fifth International Research Seminar on 'Issues in Social Security', held on 14-17 June 1997 in Sweden by the Foundation for International Studies on Social Security (FISS) in memory of Brian Abel-Smith. The chapters cover a wide range of subjects related to old age pension reform, family policy, employment, privatization of social security and health care. The authors form a body of well-established researchers and scholars of world-wide reputation as well as younger scientists, stemming from various continents, and representing a range of relevant disciplines. This volume is the fourth in a series on international studies of issues in social security. The series is initiated by the Foundation for International Studies on Social Security (FISS). One of its aims is to confront different academic approaches with each other, and with public policy perspectives. Another is to give analytic reports of cross-nationally different approaches to the design and reform of welfare state programs.

Macroeconomics teaches students to be young economists, providing a contemporary approach to the subject and a wealth of real-life case studies to allow students to understand how economics works in practice. Responding to the financial crisis, this text explains the modern approach to macroeconomics with simplicity and rigour, while retaining the focus on particular characteristics of the European economy. The authors analyse different theoretical approaches and contextualise theory with up-to-date monetary policy examples. Helpful learning features throughout the text including; boxes, chapter summaries, key concepts, end of chapter exercises, and essay questions, support students' learning, and the book is accompanied by an extensive Online Resource Centre designed to help students take their learning further. Online Resource Centre: Student Resources: Sample exam questions Multiple choice questions Review questions Web appendices Web links Lecturer Resources: Power Point slides Excel based exercises for macroeconomic modelling Lecture plans Case studies Revision questions Solutions to end-of-chapter exercises Test bank VLE cartridge

Revised and updated for the 2nd edition, this textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, robots and involuntary unemployment, financial integration and house price dynamics, policies to mitigate climate change and the persistence of religion in a globalized market economy are explored. The first part starts from the "old" growth theory and bridges to the "new" growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter- and intra-sectoral trade, investigates innovation, growth and trade and limits to public debt as well as nationally and internationally optimal climate policies. The debt dynamics of the Euro Zone and the origins of intra-EMU and Asian-US trade imbalances are also explored. The book is primarily addressed to upper undergraduate and graduate students wishing to proceed to the analytically more demanding journal literature.

The study of macroeconomics can seem a daunting project. The field is complex and sometimes poorly defined and there are a variety of competing approaches. It is easy for the senior bachelor and starting master student to get lost in the forest of macroeconomics and the mathematics it uses extensively. Foundations of Modern Macroeconomics is a guide book for the interested and ambitious student. Non-partisan in its approach, it deals with all the major topics, summarising the important approaches and providing the reader with a coherent angle on all aspects of macroeconomic thought. Each chapter deals with a separate area of macroeconomics, and each contains a summary section of key points and a further reading list. Using nothing more than undergraduate mathematical skills, it takes the student from basic IS-LM style macro models to the state of the art literature on Dynamic Stochastic General Equilibrium, explaining the mathematical tricks used where they are first introduced. Fully updated and substantially revised, this third edition of Foundations of Modern Macroeconomics now includes brand new chapters covering highly topical subjects such as dynamic programming, competitive risk sharing equilibria and the New Keynesian DSGE approach.
