specifically in group theory, the character of a group representation is a function on the group that associates to each group element the trace of the corresponding matrix. The character carries the

A linear representation of a finite group is a group homomorphism: $\rho = (\rho(g))$. Here $GL(V) \{\displaystyle \text{GL}\}(V)$ is notation for a general linear group, and $\text{Aut}(V) \{\displaystyle \text{Aut}\}(V)$ for an
