For a botanist, the definitions are easier; a fruit is the structure of an angiosperm that develops from the ovary and accessory tissues and surrounds and protects the seed(s). Fruits are also important in seed dispersal. A vegetable is a part of one of the vegetative organs of the plant: roots, stems or leaves, or shoot systems.

Fruit Types Lab - Valencia College

Botanically speaking, a fruit is a ripened ovary with seeds and any other structures that enclose it at maturity. This definition of a fruit means that many 'vegetables' are fruits (squash, tomatoes, beans, corn) and many 'grains' are also fruit (rice, wheat, etc.). Remember that the ovary is part of the pistil, or female part of the flower.

Fruit Classification Lab - SAHRA

Different Fruit Types. Fruits consist of an outer layer called the pericarp, which encloses the seed or seeds. Some fruits have a fleshy, juicy pericarp. These include fruits such as: Cherries; Tomatoes; Apples; Others have dry pericarps and these include nuts and milkweed pods. Simply put, there are two common types of fruit classifications: those that are fleshy and those that are dry.

Fruit | Definition of Fruit at Dictionary.com

In botany, a berry is a fleshy fruit without a stone (pit) produced from a single flower containing one ovary.Berries so defined include grapes, currants, and tomatoes, as well as cucumbers, eggplants (aubergines) and bananas, but exclude certain fruits that meet the culinary definition of berries, such as strawberries and raspberries.The berry is the most common type of fleshy fruit in which ...

Berry (botany) - Wikipedia

Botanical definition. A nut in botany is a simple dry fruit in which the ovary wall becomes increasingly hard as it matures, and where the seed remains unattached or free within the ovary wall. Most nuts come from the pistils with inferior ovaries (see flower) and all are indehiscent (not opening at maturity). True nuts are produced, for example, by some plant families of the order Fagales.

Nut (fruit) - Wikipedia

And so it is here that we turn to the relevant definition of fruit: "the usually edible reproductive body of a seed plant; especially: one having a sweet pulp." The tomato plant is a seed plant—it bears seeds—and the tomato that grows from it is an edible reproductive body; the seeds within the tomato are the means by which the tomato plant reproduces.
