Assessment and Treatment of Muscle Imbalance:The Janda

Critically ill patients lose most of their muscle strength in the first few weeks on the ICU. Since they are mostly sedated in this period, active mobilization is not feasible. Neuromuscular electrical stimulation (NMES) is a treatment option in which no collaboration from the patient is needed to evoke a muscle contraction and thus could be potentially effective in the treatment of CI patients.

Assessment and treatment of muscle weakness in critically

It would be very difficult to standardize musculoskeletal treatment among all health professions, but it would be much easier to create a standardize assessment that is both time efficient and tissue specific so that the areas of soft tissue dysfunction can be addressed directly. EXSTORE Saves Time. Starting With MD's (medical doctors).
