For simple systems, installation involves establishing some form of command, shortcut, script or service for executing the software (manually or automatically).

~~Software deployment - Wikipedia~~

1. SOFTWARE INSTALLATION PLAN (SIP) 2. IDENTIFICATION NUMBER. DI-IPSC-81428. 3. DESCRIPTION/PURPOSE. 3.1 The Software Installation Plan (SIP) is a plan for installing software at user sites, including preparations, user training, and conversion from existing systems. 3.2 The SIP is developed when the developer will be involved in the installation of software at user sites and when the installation process will be sufficiently complex to require a documented plan.

~~SOFTWARE INSTALLATION PLAN (SIP) - SourceForge~~

Installation may be part of a larger software deployment process. Installation typically involves code (program) being copied/generated from the installation files to new files on the local computer for easier access by the operating system, creating necessary directories, registering environment variables, providing separate program for un-installation etc. Because code is generally copied/generated in multiple locations, uninstallation usually involves more than just erasing the program ...

~~Installation (computer programs) — Wikipedia~~

Project commissioning is the process of assuring that all systems and components of a building or industrial plant are designed, installed, tested, operated, and maintained according to the operational requirements of the owner or final client. A commissioning process may be applied not only to new projects but also to existing units and systems subject to expansion, renovation or revamping.

~~Project commissioning — Wikipedia~~

In software project management, software testing, and software engineering, verification and validation (V&V) is the process of checking that a software system meets specifications and that it fulfills its intended purpose. It may also be referred to as software quality control.

~~Software verification and validation — Wikipedia~~

In engineering and its various subdisciplines, acceptance testing is a test conducted to determine if the requirements of a specification or contract are met. It may involve chemical tests, physical tests, or performance tests.. In systems engineering, it may involve black-box testing performed on a system (for example: a piece of software, lots of manufactured mechanical parts, or batches of ...

~~Acceptance testing — Wikipedia~~

Software is the set of instructions in the form of programs to govern the computer system and to process the hardware components. To produce a software product the set of activities is used. This set is called a software process. Components of Software: There are three components of the software:
