Investing in preparedness and building the resilience of farmers is fundamental to cope with extreme drought, because responding to such situations when they hit might be too late, the head of the...

This book serves as a guide for local governments and private enterprises as they navigate the uncharted waters of investing in climate change adaptation and resilience. This book serves not only as a resource guide for identifying potential funding sources but also as a roadmap for asset management and public finance processes. It highlights practical synergies between funding mechanisms, as well as the conflicts that may arise between varying interests and strategies. While the main focus of this work is on the State of California, this book offers broader insights for how states, local governments and private enterprises can take those critical first steps in investing in society's collective adaptation to climate change.

Drought is a slow-onset natural hazard that is often referred to as a creeping phenomenon. The challenge of monitoring drought's onset and evolution, and identifying its termination or end is one that scientists, natural resource managers, and decision makers have been struggling with for decades. However, drought management must be aimed at reducing the risks of future drought events on economies, the environment, and the social fabric of regions. As with many countries, droughts are often managed as a crisis in Brazil, rather than events for which officials and communities proactively prepare. Although droughts are not new to Brazil, the recent spate of droughts in the poverty stricken semi-arid Northeast and the industrial hub of São Paulo in the Southeast has forced the country to think more seriously about finally changing its drought policies and management approaches. The book is told through the perspectives of the ministers and secretaries, state policy and technical officials, civil society organizations, and development practitioners that helped to facilitate the shift in paradigm in Brazil from crisis management and towards proactive management of droughts. It is written in a style that is appealing to both technical and non-technical audiences, and aims to provide a framework and lessons for other countries to consider when embarking upon similar efforts to improve their own drought policy and management systems.

Agricultural water management is a vital practice in ensuring reduction, and environmental protection. After decades of successfully expanding irrigation and improving productivity, farmers and managers face an emerging crisis in the form of poorly performing irrigation schemes, slow modernization, declining investment, constrained water availability, and environmental degradation. More and better investments in agricultural water are needed. In response, the World Bank, in conjunction with many partner agencies, has compiled a selection of good experiences that can guide practitioners in the design of quality investments in agricultural water. The messages of 'Shaping the Future of Water for Agriculture: A Sourcebook for Investment in Agricultural Water Management' center around the key challenges to agricultural water management, specifically:

- Building policies and incentives
- Designing institutional reforms
- Investing in irrigation systems improvement and modernization
- Investing in groundwater irrigation
- Investing in drainage and water quality management
- Investing in water management in rainfed agriculture
- Investing in agricultural water management in

multipurpose operations • Coping with extreme climatic conditions • Assessing the social, economic, and environmental impacts of agricultural water investments 'Shaping the Future of Water for Agriculture' is an important resource for those interested and engaged in development with a focus on agricultural water.

Investing to promote agricultural growth and poverty reduction is a central pillar of the World Bank's current rural strategy, 'Reaching the Rural Poor' (2003). This 'Sourcebook' addresses how to implement the rural strategy, by sharing information on investment options and identifying innovative approaches that will aid the design of future lending programs for agriculture. It provides generic good practices and many examples that demonstrate investment in agriculture can provide rewarding and sustainable returns to development efforts. It is divided into eleven self-contained modules. Each module contains three different types of subunits that can also be stand-alone documents: I. Module Overview II. Agricultural Investment Notes III. Innovative Activity Profiles. The stand-alone nature of the subunits allows flexibility and adaptability of the material. Selected readings and web links are also provided for readers who seek more in-depth information. The 'Sourcebook' draws on a wide range of experiences from donor agencies, governments, institutions, and other groups active in agricultural development. It is an invaluable reference tool for policy makers, professionals, academics and students, and anyone with an interest in agricultural investments.

The prevalence of natural disasters in recent years has highlighted the importance of preparing adequately for disasters and dealing efficiently with their consequences. This book addresses how countries can enhance their resilience against natural disasters and move towards economic growth and sustainable development. Covering a wide range of issues, it shows how well thought-out measures can be applied to minimize the impacts of disasters in a variety of situations. Starting with the need for coping with a rapidly changing global environment, the book goes on to demonstrate ways to strengthen awareness of the effectiveness of preventive measures, including in the reconstruction phase. The book also covers the roles played by different actors as well as tools and technologies for improved disaster risk reduction. It focuses on a variety of case studies from across Asia, Africa and Latin America, drawing out lessons that can be applied internationally. This book will be of great interest to professionals in disaster management, including national governments, donors, communities/citizens, NGOs and private sector. It will also be a highly valuable resource for students and researchers in disaster management and policy, development studies and economics.

The research of the last decade has demonstrated that ecosystems and human systems are influenced by multiple factors, including climate, land use, and the by-products of resource use. Understanding the net impact of a suite of simultaneously occurring environmental changes is essential for developing effective response strategies. Using case studies on drought and a wide range of atmosphere-ecosystem interactions, a workshop was held in September 2005 to gather different perspectives on multiple stress scenarios. The overarching lesson of the workshop is that society will require new and improved strategies for coping with multiple stresses and their impacts on natural socioeconomic systems. Improved communication among stakeholders; increased observations (especially at regional scales); improved model and information systems; and increased infrastructure to provide better environmental monitoring, vulnerability assessment, and response analysis are all important parts of moving toward better understanding of and response to situations involving multiple stresses. During the workshop, seven near-term opportunities for research and infrastructure that could help advance understanding of multiple stresses were also identified.

This volume includes over 30 chapters, written by experts from around the world. It examines the environmental aspects of drought such as groundwater and soil contamination, river low-flow, urban water quality, and desertification. It also examines the effects of climate change and variability on drought, and discusses the differences in groundwater, rainfall, and temperatures and their related effects. It presents analytical modeling for better understanding drought in uncertain and changing climates.
