But most courts weren't receptive to that theory, according to legal experts ... Neuro-Communication Services Inc., an Ohio audiology practice, during the COVID-19 pandemic under government ...

It is a comprehensive treatise on Water Resources Development and Irrigation Management. For the last 30 years the book has enjoyed the status of an definitive textbook on the subject. It has now been thoroughly revised and updated, and thus substantially enlarged. In addition to the wholesale revision of the existing chapters, three new chapters have been added to the book, namely, Lift Irrigation Systems and their Design , Water Requirement of Crops and Irrigation Management ,and Economic Evaluation of Irrigation Projects and Water Pricing Policy .

Plant production in hydroponics and soilless culture is rapidly expanding throughout the world, raising a great interest in the scientific community. For the first time in an authoritative reference book, authors cover both theoretical and practical aspects of hydroponics (growing plants without the use of soil). This reference book covers the state-of-the-art in this area, while offering a clear view of supplying plants with nutrients other than soil. Soilless Culture provides the reader with an understanding of the properties of the various soilless media and how these properties affect plant performance in relation to basic horticultural operations, such as irrigation and fertilization. This book is ideal for agronomists, horticulturalists, greenhouse and nursery managers, extension specialists, and people involved with the production of plants. * Comprehensive discussion of hydroponic systems, irrigation, and control measures allows readers to achieve optimal performance * State-of-the-art book on all theoretical aspects of hydroponics and soilless culture including a thorough description of the root system, its functions and limitation posed by restricted root volume * Critical and updated reviews of current analytical methods and how to translate their results to irrigation and fertilization practices * Definitive chapters on recycled, no-discharge systems including salinity and nutrition management and pathogen eradication * Up-to-date description of all important types of growing media

The practice of irrigation; The irrigation requirement; Surface irrigation systems; Field measurement techniques; Evaluation of the system; Volume balance field design; Land leveling; Operation of surface irrigation systems; Surge flow surface irrigation; Headland facilities; Fundamentals of surface irrigation hydraulics; The hydrodynamic model: characteristic approach; The hydrodynamic model: eulerian integration;The zero-inertia model; The kinematic-wave model; The volume balance model.
