Construction Site Machinery | Site Equipment & Site Machinery

An excavator is a heavy piece of machinery used to dig and crush material on a site. It consists of a hydraulic crane-like boom with a metal shovel that has sharp prongs on the end. The driver's cab is set on a rotating platform, making the machine more maneuverable. The machine is mobile due to an undercarriage consisting of heavy-duty tracks.

Construction Site Machines
At Work

A construction site is any piece of land where a building is being built or repaired. Those who work on construction sites are often required to use large tools and pieces of machinery, work at height, and in environments where hazardous materials are present. Because of the nature of such work, working on construction sites can be dangerous.
