plant life cycle stage that begins when cells in reproductive organs undergo meiosis and produce haploid cells. sporophyte. plant life cycle stage that begins when an egg is fertilized by a sperm. frond. leaf of a fern that grows from the rhizome. rhizome. underground stem of a fern. sori.

## ~~Section 1 Introduction to Plant Reproduction Flashcards ...~~

An angiosperm is a plant that produces seeds within a fruit. Reproduction begins when the pollen from the anther is in contact with the stigma. Eventually the egg will be fertilized in the ovule that is in the ovary and turn from a zygote to an embryo inside the seed. The life cycle of angiosperms among the different species is very similar: Pollination, fertilization, and the development of fruit.
