psicología de feldman robert: Libros - Iberlibro

Todos hemos oído estas frases. y las hemos dicho. Robert Feldman, profesor de psicología y autoridad de prestigio mundial en las causas y efectos del engaño, demuestra, con ejemplos extraídos de la actualidad inmediata y datos objetivos, hasta qué punto la mentira está enraizada en nuestra sociedad.

Cutting-edge science and the ancient wisdom of Buddhism have come together to reveal that, contrary to popular belief, we have the power to literally change our brains by changing our minds. Recent pioneering experiments in neuroplasticity—the ability of the brain to change in response to experience—reveal that the brain is capable of altering its structure and function, and even of generating new neurons, a power we retain well into old age. The brain can adapt, heal, renew itself after trauma, compensate for disabilities, rewire itself to overcome dyslexia, and break cycles of depression and OCD. And as scientists are learning from studies performed on Buddhist monks, it is not only the outside world that can change the brain, so can the mind and, in particular, focused attention through the classic Buddhist practice of mindfulness. With her gift for making science accessible, meaningful, and compelling, science writer Sharon Begley illuminates a profound shift in our understanding of how the brain and the mind interact and takes us to the leading edge of a revolution in what it means to be human. Praise for Train Your Mind, Change Your Brain "There are two great things about this book. One is that it shows us how nothing about our brains is set in stone. The other is that it is written by Sharon Begley, one of the best science writers around. Begley is superb at framing the latest facts within the larger context of the field. This is a terrific book." Robert M. Sapolsky, author of Why Zebras Don't Get Ulcers "Excellent . . . elegant and lucid prose . . . an open mind here will be rewarded." Discover "A strong dose of hope along with a strong dose of science and Buddhist thought." The San Diego Union-Tribune

Author and consultant Jennifer Garvey Berger has worked with all types of leaders—from top executives at Google to nonprofit directors who are trying to make a dent in social change. She hears a version of the same plea from every client in nearly every sector around the world: "I know that complexity and uncertainty are testing my instincts, but I don't know which to trust. Is there some way to know what to do when I can't know what's next?" Her newest work is an answer to this plea. Using her background in adult development, complexity theories, and leadership consultancy, Garvey Berger discerns five pernicious and pervasive "mind traps" to frame the book. These are: the desire for simple stories, our sense that we are right, our desire to get along with others in our group, our fixation with control, and our constant quest to protect and defend our egos. In addition to understanding why these natural impulses steer us wrong in a fast-moving world, leaders will get powerful questions and approaches that help them escape these patterns.

A groundbreaking tour of the human mind that illuminates the biological nature of our inner worlds and emotions, through gripping, moving—and, at times, harrowing—clinical stories "Poetic, mind-stretching, and through it all, deeply human." Daniel Levitin, New York Times bestselling author of The Organized Mind Karl Deisseroth has spent his life pursuing truths about the human mind, both as a renowned clinical psychiatrist and as a researcher creating and developing the revolutionary field of optogenetics, which uses light to help decipher the brain's workings. In Projections, he combines his knowledge of the brain's inner circuitry with a deep empathy for his patients to examine what mental illness reveals about the human mind and the origin of human feelings—how the broken can illuminate the unbroken. Through cutting-edge research and gripping case studies from Deisseroth's own patients, Projections tells a larger story about the material origins of human emotion, bridging the gap between the ancient circuits of our brain and the poignant moments of suffering in our daily lives. The stories of Deisseroth's patients are rich with humanity and shine an unprecedented light on the self—and the ways in which it can break down. A young woman with an eating disorder reveals how the mind can rebel against the brain's most primitive drives of hunger and thirst; an older man, smothered into silence by depression and dementia, shows how humans evolved to feel not only joy but also its absence; and a lonely Uighur woman far from her homeland teaches both the importance—and challenges—of deep social bonds. Illuminating, literary, and essential, Projections is a revelatory, immensely powerful work. It transforms our understanding not only of the brain but of ourselves as social beings—giving vivid illustrations through science and resonant human stories of our yearning for connection and meaning.

The author of the acclaimed bestseller *Bobos in Paradise*, which hilariously described the upscale American culture, takes a witty look at how being American shapes us, and how America's suburban civilization will shape the world's future. Take a look at Americans in their natural habitat. You see suburban guys at Home Depot doing that special manly, waddling walk that American men do in the presence of large amounts of lumber; super-efficient ubermoms who chair school auctions, organize the PTA, and weigh less than their children; workaholic corporate types boarding airplanes while talking on their cell phones in a sort of panic because they know that when the door closes they have to turn their precious phone off and it will be like somebody stepped on their trachea. Looking at all this, you might come to the conclusion that we Americans are not the most profound people on earth. Indeed, there are millions around the world who regard us as the great bimbos of the globe: hardworking and fun, but also materialistic and spiritually shallow. They've got a point. As you drive through the sprawling suburbs or eat in the suburban chain restaurants (which if they merged would be called Chili's Olive Garden Hard Rock Outback Cantina), questions do occur. Are we really as shallow as we look? Is there anything that unites us across the divides of politics, race, class, and geography? What does it mean to be American? Well, mentality matters, and sometimes mentality is all that matters. As diverse as we are, as complacent as we sometimes seem, Americans are united by a common mentality, which we have inherited from our ancestors and pass on, sometimes unreflectingly, to our kids. We are united by future-mindedness. We see the present from the vantage point of the future. We are tantalized, at every second of every day, by the awareness of grand possibilities ahead of us, by the bounty we can realize just over the next ridge. This mentality leads us to work feverishly hard, move more than any other people on earth, switch jobs, switch religions. It makes us anxious and optimistic, manic and discombobulating. Even in the superficiality of modern suburban life, there is some deeper impulse still throbbing in the heart of average Americans. That impulse is the subject of this book.

How does a boy from a financially and intellectually impoverished background grow up to become a Harvard researcher, win international acclaim for his groundbreaking work, and catch fire as a pioneering psychologist? As the only person in the history of the American Psychological Association to have won all three of its highest honors—for distinguished research, teaching, and writing—Elliot Aronson is living proof that humans are capable of capturing the power of the situation and conquering the prison of personality. A personal and compelling look into Aronson's profound contributions to the field of social psychology, *Not by Chance Alone* is a lifelong story of human potential and the power of social change.

Ahimsa \uh-HIM-sah \ n. a Buddhist doctrine of non-violence. Add in a fun, modern, scientific approach and you've got a great way to train your dog! *Dog Lovers*: Learn to solve and prevent a variety of problems, including barking, fear, puppy socialization, housetraining, aggression, fear, separation anxiety, and pulling on leash. *Pro Trainers*: Get more ways to teach skills and solve problems. Save time on write-ups by using this book as an in-home reference for your clients. *Breeders and veterinarians*: Send puppies home with this book to start them off on the right paw. This 108-page book is an introduction to dog training that started as the companion exercises for Ahimsa Dog Training classes in Seattle. It has practical exercises that start from a basic level and work up through advanced work on the most important behaviors for dogs to know. This quick manual is helpful for dog trainers to use with clients or new ideas for exercises and for breeders to share with new puppy parents. Includes info on how dogs learn, clicker training, how to get rid of bad behaviors (puppy biting, fear/aggression, separation anxiety, etc.), and how to teach good behaviors, like coming when called, the name, watch, relaxation, sit, down, stay, wait, touch, walking on leash, give, go to your bed, and more!

"14th edition of *Essentials of Understanding Psychology* has relied heavily-and benefited substantially-from the advice of instructors and students from a wide range of backgrounds. Effective introduction to a discipline must be oriented to students-informing them, engaging them, and exciting them about the field and helping them connect it to their worlds. All these goals are achieved in *Essentials of Understanding Psychology*, 14/e"--

This comprehensive survey of neuropsychopharmacology is unique in its breadth of coverage, from molecular to behavioural pharmacology, and from basic animal studies of drug action to clinical applications. Lavish illustrations and concise chapter summaries reinforce key concepts, while extensive references point the way to further study. The book is intended for advanced undergraduate, graduate and medical students, and neuroscientists seeking current information on psychoactive drugs.

In this riveting journey through the hidden realms of the human mind, a world-renowned psychiatrist and neuroscientist explores the origins of human emotion, and examines what mental illnesses reveal about all of us - how the broken can illuminate the unbroken. 'Remarkable ... he has reimagined and redefined what literary non-fiction can be ... poetic, mind-stretching, and through it all, deeply human' Daniel Levitin 'Revelatory ... it recalls the case histories of Oliver Sacks, at times the sweep of Yuval Harari's *Sapiens*. He writes with an evident love of words - but also, with a lucid line of scientific enquiry' *Guardian* Why do we feel what we feel? Mental illness is one of the greatest causes of human suffering, but the reasons we bear this burden, and the nature of these diseases, have remained mysterious. Now, our understanding has reached a tipping point. In *Connections*, Professor Karl Deisseroth intertwines gripping case studies from his experience as an emergency psychiatry physician, with breakthrough scientific discoveries from astounding new technology (including optogenetics, which he developed to allow turning specific brain cells on or off, with light). By linking insights from this technology to deeply moving stories of his patients and to our shared evolutionary history, Deisseroth tells a larger story about the origins of human emotion. A young woman with an eating disorder reveals how the mind can rebel against the brain's most primitive drives of hunger and thirst; an older man, smothered into silence by dementia, shows how humans evolved to feel joy and its absence; and a lonely Uyghur woman far from her homeland teaches both the importance - and challenges - of deep social bonds. Addressing some of the most timeless questions about the human condition while illuminating the roots of misunderstood disorders such as depression, psychosis, schizophrenia and sociopathy, *Connections* transforms the way we understand the brain, and our selves.
