Be selective when using computer software packages in qualitative analysis: A great proliferation of software packages that can be used to aid analysis of qualitative data has been developed in recent years. Most of these packages were reviewed by Weitzman and Miles (1995), who grouped them into six types: word processors, word retrievers, textbase managers, code-and-retrieve programs, code-based theory builders, and conceptual network builders.

In constructivist qualitative analysis, an inductive approach is used to identify codes emerging from the data. Although deductive reasoning is most often associated with quantitative methodology, deductive coding methods are used in a qualitative study when the researcher is working with a "provisional start list of codes" (Miles, Huberman, & Salda\u00f1a, 2014, p. 81).
