

Read Free Reactions Of Glycidyl Derivatives With Reactions Of Glycidyl Derivatives With Ambident

Getting the books **reactions of glycidyl derivatives with ambident** now is not type of challenging means. You could not abandoned going behind books addition or library or borrowing from your links to way in them. This is an agreed simple means to specifically acquire lead by on-line. This online declaration reactions of glycidyl derivatives with ambident can be one of the options to accompany you

Read Free Reactions Of Glycidyl Derivatives With

subsequently having other time.

It will not waste your time. take me, the e-book will extremely sky you additional concern to read. Just invest tiny mature to gate this on-line publication **reactions of glycidyl derivatives with ambident** as capably as evaluation them wherever you are now.

Reactions Of Glycidyl Derivatives With Ambident

A convenient procedure to perform such derivatizations starts with a polymer having glycidyl groups. Such polymers can be further derivatized using various reactions including hydrolysis, amination, alkylation, and sulfonation. Some of these reactions are shown in Figure 6.2.6. Other reagents besides those indicated in this figure were used to react with the glycidyl groups bonded to a polymeric backbone.

Photolysis of these derivatives results in the formation of amines which induce cross-linking of poly(glycidyl methacrylate) (PGMA) upon heating. The bifunctional derivative 2 is more efficient than the monofunctional derivative 1 in inducing thermal cross-linking of PGMA, with a maximum degree of insolubilization increasing up to ca. 90%.

Retrosynthetic analysis of 2 shows a disconnection into a central chiral glycidyl synthon which could be sequentially functionalised to introduce the aldoxime and amine components . The stereochemical integrity at C2 would be retained by sequential and specific reaction at C1 followed by C3 of the glycidyl synthon . Two complementary methods would support the development of SAR at the right-hand side (RHS) amine (path a) and left-hand side (LHS) pyridine (path b) groups from advanced ...
