A passion that won't be denied despite the circumstances.

Though Leigh cared deeply for Jim, it was his fiery older

brother Tre who held the key to her heart. For the past ten

years she's lived with the daily pain of knowing that Tre

turned his back on the passion that had flared hot and bright

between them. A second chance at a once-in-a-lifetime love.

Tre knew from the moment that he first saw Leigh stroking his half-wild horse that her elegant, delicate appearance belied the depth and strength of her spirit. He'd dared to make Leigh his own, showing loyalty to nothing and no one beyond the laws of nature that clearly decreed that she was his. When Leigh denied what should have been undeniable, he knew the bitter taste of betrayal. Now a family tragedy has forced Tre and Leigh together once again. Guilt, anger and betrayal rage between them, but so does a desire hot enough to incinerate all else in its wake.

Science, both as a scholarly discipline and as a concept in the popular imagination, was critical to building hegemony in the British Empire. It also inspired alternative ideas of progress by elites and the disenfranchised: these competing spectres continue to haunt postcolonial modernities. Why and how has science so powerfully shaped both the common sense of individuals and the development of postcolonial states? Philip suggests that our ideas of race and resources are key. *Civilising Natures* tells us how race and nature are fundamental to understanding colonial modernities, and along

the way, it complicates our understandings of the relationships between science and religion, pre-modern and civilised, environment and society.

In *Overcoming Crystal Methamphetamine Addiction*, one of the few books to address the topic for a general audience, Dr. Steven Lee, MD, a psychiatrist who specializes in crystal meth addiction, offers a complete guide to the drug, its effects, and how to overcome it. Based on extensive scientific and social research and drawing from his professional experience, he covers everything from the definition and history of crystal meth to the physical and psychological effects; from dealing with the addictive personality to helping a friend or family member cope with it. He focuses on understanding rather than outright condemnation of the drug, and empathetically covers all of the crucial questions: What is crystal meth? How is it made? How does it affect the body? How do you know if you're addicted to it? How do you stop using it? What if you don't want to stop? If you are going to use CM anyway, how can you minimize the damage? What if you quit but slipped and used again?

Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday, an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker, a charismatic communicator, and a forceful intellectual leader. The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its *raison d'Être*. The diversity of interests covered here reflects the variety of Bob's concerns. Read on. It is an intellectual feast. Before you begin, permit me to send him a brief personal, but public, message: Bob, how right you were, and how wrong I was. I should explain. When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new, having taken several years to become at all widely known. Research groups to investigate various aspects of resolution sprang up at several institutions, the one organized by Bernard Meltzer at Edinburgh University being among the first. For the half-dozen years that Bob was a leading member of Bernard's group, I was a frequent visitor to it, and I saw a lot of him. We had many discussions about logic, computation, and language.

think about nature and matter, and visualize chemical concepts as working chemists do. It also offers an exceptional level of support to help students develop their mathematical and problem-solving skills. For the new edition, Chemical Principles now takes a modular approach, with coverage organized as a series of brief Topics within 13 major areas of focus, including a refresher on the fundamentals of chemistry and an online-only section on techniques.

General George S. Patton Jr, an inspirational leader and outstanding tactician, has intrigued and confounded his biographers. Utilising untapped archival materials in both the USA and UK, government documents, family papers, and oral histories, Hirshson creates the most balanced portrait of Patton ever written. It reveals Patton as a complex soldier capable of brilliant military manoeuvres but also of inspiring his troops with fiery speeches that resulted in horrendous acts, such as the massacres of Italian civilians. It explains Patton's belief in a soldier's Valhalla, connects the family's wealth to one of America's bitterest labour strikes, and disputes the usual interpretation of Patton's relief from command of the Third Army. In investigating this complex man, Hirshson has uncovered surprising material about a series of civilian massacres in Sicily, about the two slapping incidents, about attempts to exploit Patton's diary after his death, and about Patton's relations with top Allied generals. Patton emerges as a soldier of great imagination and courage, and his military campaigns make for edge-of-the-seat reading. All the drama of Patton's life comes alive in this meticulously documented volume.
