# Read PDF Sheet And Plate Metalwork

Sheet metal and plate metal are different forms of steel. The most notable difference between plate and sheet metal is the thickness of the products. Plate metal is thicker when compared to sheet metal. This increased thickness gives plate metal a considerable edge over sheet metal when it comes to durability and structural

# Read PDF Sheet And Plate Metalwork

strength.

## *Difference Between Sheet and Plate - Step by Step*

Any sheet of metal that is 6mm or thicker is a plate metal. Plate metals are known for their durability, so they're used to build structures that require this property.

# Read PDF Sheet And Plate Metalwork

With this type of metal, it doesn't matter if the overall mass is increased during the metal fabrication process. This makes it ideal to use in automobile manufacturing.
