The second edition of Giving a Lecture builds upon the reputation and success of the Key Guides for Effective Teaching in Higher Education series. It is an excellent resource for those new to teaching at the University and College level and for those who just want to reflect upon and refresh their lecturing practice. The best selling first edition has been fully revised, and this edition continues to cover all the basics on how to go about lecturing while maintaining its jargon-free and accessible style. New lecturers will find the second edition equips them with the essential tools and guidance for delivering a successful lecture, and explains exciting new developments along with the fundamentals of lecturing. Addressing a number of rapid developments that have occurred since its first publication in 2004, the second edition provides: A new chapter on podcasting and e-lecturing Much more on the effective use of PowerPoint Guidance on using interactive handsets to promote active learning and engagement Consideration of the role of Lectures in problem based learning (PBL) courses An expanded chapter that addresses current diversity/inclusivity issues A fresh look with new Illustrations Updated 'Recommended Reading and Web-Resource' sections This handy guide uses a multi-disciplinary approach based on sound educational theory to provide clear guidance and engaging ideas on giving a memorable and motivational lecture. Readers will find its straightforward approach is both readable and very practical, and new University and College Teachers, Graduate Teaching Assistants, Part-time Tutors, Teaching Clinicians and Practitioners, together with those interested in educational and staff development, will find this book provides them with all the guidance they need to lecture with confidence and skill.

Lecture Notes: Tropical Medicine is a comprehensive introduction to tropical medicine. The new edition is in full colour throughout with over 40 colour images integrated with the text. There is a new chapter on syndromes of undernutrition (in both children and adults), and the section on non-communicable diseases has been extended to include mental health problems in the tropics. The core information is presented in a clear and concise way, with extensive use of diagrams, algorithms, tables and boxes. All chapters have been updated to reflect current best practice and the annotated bibliographies and lists of web-based resources have been extended. The chapters on HIV, tuberculosis and malaria have undergone particularly extensive revision, reflecting rapid changes in these areas since the last edition. Lecture Notes: Tropical Medicine is particularly aimed at postgraduate doctors attending tropical medicine courses, as well as medical students taking a tropical medicine elective period. It will also be useful to a wide range of other health professionals involved with medicine in the tropics, or imported tropical disease.
