Written in a clear, conversational style, this book provides a solid introduction to such topics as relations, functions, and

This curriculum is aimed at grades 6-8, fitting into most math approaches the

year or two years prior to starting high school algebra.

If following traditional grade levels, Book 1 should be completed in grade 6 or 7, and Book 2 in grade 7 or 8. In Book 1 students should have a basic knowledge of arithmetic (basic

arithmetic will be reviewed, but at a fast pace and while teaching problem-solving skills and a biblical worldview of math) and sufficient mental development to think through the concepts and examples given. Typically, anyone in sixth grade or

This book is an introduction to the language and standard proof methods of mathematics. It is a bridge from the computational courses (such as calculus or
