TuneCrack stands for: Crack the tuning problem - Learn to tune instruments precisely. The importance of tuning is often underestimated. However, tuning is a necessary step for every performance. TuneCrack has exercises to improve your listening skill and your pitch transfer skill. Your listening skill is trained with the Precision Listening Method. Your task is to solve ever more challenging questions: until a precision to the cent. Your transfer skill is trained with the Pitch Keeper Method. First, the program introduces you to your personal Absolute Pitch Point.

With appropriate exercises and feedback you learn how to take over a pitch and keep the sound in your mind for an ever-lengthier time period. Transferring a pitch and keeping it in your mind is an important step in understanding the musical center of a piece. Since humans can only express pitch by singing, the program listens to you and gives you feedback based on your singing: a colored pitch line shows, if you are too low, too high or on target. The program tracks your progress and lets you see the statistics in graphical form. Thus, your weak and strong points get visible. Eliminate weak points by training. Build upon and extend your strong points. With your strong points start building an absolute pitch repertoire.

To train your ear, one must learn to distinguish sounds. Acquiring Perfect Pitch requires in addition to remember pitches. In early childhood we collect the vast part of our relevant sound memory by imitating the sounds with our vocal cords. However, our brain doesn't stop there. At a later age we can still learn a new foreign language. Three new methods to acquire Absolute Pitch and Relative Pitch, supported by software feedback, are presented in this book. The first method, the Singing Funnel method, lets you acquire Absolute Pitch like a foreign language. The second method, the Octave Anchor Pitches method helps you to orientate yourself in the pitch realm. The last method, the Interval Overtone method, improves your interval hearing.

Handbook of Naturally Occurring Compounds, Volume I: Acetogenins, Shikimates, and Carbohydrates contains most of the known naturally occurring compounds and their corresponding structures, classified into acetogenins, shikimates, and carbohydrates. Each structure includes the molecular formula, molecular weight, optical rotation, melting point, literature reference, and classification number. This handbook is comprised of nine chapters and begins with an introduction to the primary classes of naturally occurring compounds to be discussed in the following chapters,

namely shikimate aromatics, acetate/shikimate aromatics, acetate/malonate aromatics, acyclic and heterocyclic acetogenins, carbohydrates, and complex classes. The shikimic acid pathway is described, along with the oxygenation patterns of shikimate-derived aromatics. Compounds such as lignans, terphenyls, macrolides, and miscellaneous phenols are considered. Oxyheterocyclics related to the linear acetogenins/phenylpolyynes are also analyzed. The final chapter provides three indices in addition to the structural guides, namely, Molecular Weight Index, Molecular Formula Index, and Alphabetical Index. This volume will be a useful resource for chemists and chemistry students.

International Symposium on Microsomes and Drug Oxidations held in Ann Arbor, July 1979. The symposium reviewed progress in the understanding of scientific and biomedical problems from a biochemical, biophysical, pharmacological, and toxicological perspective. The book contains 117 contributions made by researchers at the symposium, which are organized into three sections. The papers in Section I focus on the chemical and physical characteristics of cytochrome P-450. Section II examines the mechanisms of action of cytochrome P-450 and related enzymes. The studies in Section III deal with the influence of membrane structure and protein synthesis on electron transfer components. This book seeks to aid future progress in understanding the complexities of metabolic transformations by these versatile enzyme systems that act on

Polymer Syntheses, Volume I presents detailed laboratory instructions for the preparation of polymers by different functional group classes. This book provides the laboratory procedures for the preparation of polymers containing phosphorus in various oxidation states. Organized into 15 chapters, this volume begins with an overview of some selected preparative methods for carrying out the major methods of polymerization in the laboratory. This text then examines the synthesis of phosphonitrilic polymers. Other chapters consider the synthesis of peroxide and hydroperoxide free radical

initiators. This book discusses as well the principles involved in the preparation of emulsion polymers, which are applicable to the preparation of polymers of a wide variety of vinyl monomers and many copolymerizations. The final chapter deals with the chemistry of organometallic and organometalloid peroxides. This book is a valuable resource for chemists involved in the designing of phosphorus polymers to meet fire retardant requirements of various products.
